Fermaca Digital Origins

Mexico’s Most Advanced and Sophisticated AI Factory

January 2025

fermaca
digital origins

Fermaca Dreams Group – Our history

1960 – Founded by Fernando Calvillo Sr.

1997 – JV with Oneok and Williams Companies to obtain gas transportation permit in Mexico

2000 – JV with Oil Tanking to develop fuel storage facilities in Mexico

2001 – Acquires Toluca pipeline project from Shell Oil

2007 – Partners with Ospraie Special Opportunities Fund

2011 – CFE awards Fermaca the Tarahumara pipeline project

2012 – Signs first natural gas Transmission Service Agreement with CFE for 25 years

2013 – Completion of the Tarahumara pipeline

2014 – CFE awards Fermaca the Soto La Marina compression station project

2015 – Partners Group closes the acquisition of majority stake in Fermaca

CFE awards Fermaca El Encino-La Laguna pipeline

2016 – Fermaca announces 50/50 JV with ONEOK for the construction of Roadrunner

CFE awards Fermaca La Laguna-Aguascalientes and Villa de Reyes Aguascalientes Guadalajara pipeline projects

2017 – Launching of Santa Fe Gas & CHGNA

Closed the refinancing of EELL for USD 705M

2018 – Fermaca begins due diligence into Hyperscale Data Centers, Dark Fiber via Gas ROW & Fertilizers

BCYSA Infrastructure is created to develop Infrastructure Projects

2022 – BCYSA Infrastructure is rebranded to Fermaca Infrastructure (FI)

Fermaca Infrastructure Completes Engineering Plans and Begins acquisition of Dark Fiber Route ROW

Fermaca Networks is formed to lead Fiber and Data Center Projects

2023 – Fermaca Data Centers Signs exclusive use of technology agreement with DDI Inc.

Fermachem KBR delivers the first stage of engineering for Ammonia and Urea plant, and files for environmental permit.

2025 – Esemtia IPO ESENTIA ENERGY SYSTEMS (ESENTIAII.MX) successfully launched its IPO in the Mexican Stock Exchange

Since 2014 Fermaca has raised $ 1 bin Equity Capital and over $2 BN in Debt Capital. - Commercial Value 4 BN.

Fermaca Dreams has presence in Telecommunications, Petrochemical, Engineering and Construction, Energy, and Marine sectors.

With roots going back 60 years, Fermaca Dreams is a conglomerate of companies focused on developing and executing key infrastructure projects in Mexico.
With proven track record, a successful history of partnerships, and a strong and professional management team.
Fermaca Dreams companies are committed to the highest standards in project development, execution and operation.
“Born to Grow” is at the essence of Fermaca Dreams DNA, relentlessly searching for further growth opportunities.

Unconventional Infrastructure

A set of activity-based businesses focused on value creation.

Infrastructure platform led by Fernando and Manuel Calvillo

Entrepreneurs with **more than 50 years** in Mexico, attracting top-level institutional investors and C-level management.

Cross-functional team capable of developing, financing and operating complex projects.

Portfolio of opportunities identified for execution along an energy corridor.

fermaca infraestructura

Incubator of ideas to take advantage of the market intelligence of the group in developing projects.

- Founded in 1960.
- +50 years of operation

Bcysa

World-class capabilities and technology partners, along with national execution.

Commitment to enable growth.

The founders and key executive team are committed to participating in the development of this opportunity across different locations.

- Incorporating ESG as a first step since 2015.
- Internationally evaluated and aligned with quality, labor, environmental and safety norms and standards.

SISTEMA DE GESTION ISO 9001 2015 BICERT
SISTEMA DE GESTION ISO 14001 2015 BICERT
SISTEMA DE GESTION ISO 45001 2018 BICERT

ESR

SUSTAINABLE DEVELOPMENT GOALS

From the conceptualization of the idea, development, construction, operation and growth of large-scale projects.

Bcysa Field Engineers

Local experience in rights of way, permits, environmental, archaeological and social impact areas

Proven expertise and track record as Owner's Engineers

Bcysa's proven execution in many areas necessary for the success of large-scale projects is well known and documented.

Fermaca's Proven Commitment to ESG Excellence

A Mexican leader in the infrastructure sector, committed to driving Mexico's growth

- Fermaca is dedicated to developing projects that not only strengthen the Mexico's infrastructure but also create **measurable economic, environmental, and social value**.
- Commitment extends beyond business operations by engaging with the communities, designing **tailored social initiatives** that address their unique challenges and aspirations.
- Fermaca allocates a **defined percentage of CapEx** for social contributions in all its projects, ensuring that each initiative makes a positive social impact.
- By fostering collaborative partnerships with local stakeholders, Fermaca aims to build **sustainable, long-term relationships that drive progress and well-being**.

Eduactional Infrastructure

- 17 schoolyard domes
- Classroom at *El Mirador* Kindergarten *(San Luis Potosí)*
- Auditorium at Instituto Tecnológico de Jiménez *(Chihuahua)*

Renewable Energy

- Solar panel system installation at Casa Hogar Misericordia *(Chihuahua)*
- Donation of 84 solar water heaters

Art and Sports Promotion

- Mural on a sports court *(Durango)*
- Delivery of sports uniforms *(Durango)*
- Bicycle donations at *El Mirador (San Luis Potosí)*

Our efforts are fully aligned with the United Nations Sustainable Development Goals (SDGs), ensuring **meaningful contributions** to global sustainability objectives.

SUSTAINABLE DEVELOPMENT GOALS

Community Infrastructure

- Casa Hogar Yireh *(Chihuahua)*
- Casa Ejidal *Machado (San Luis Potosí)*
- Paving of 11 streets in Chihuahua

Water Access

- Installation of irrigation water pump systems
- River dredging in Saucillo
- Water storage tank in Chihuahua

Environment Commitment

- Planting +500 *Quercus* trees

Team Capabilities

Execution

Bcysa A key component for the success of infrastructure projects in Mexico.

- Proven track record of success in enabling large-scale infrastructure projects in Mexico, with over 50 years of experience.
- Active contribution to national progress within a framework of social responsibility and sustainability.
- Numerous certifications and awards for performance under the highest quality standards in the Mexican industry.

Financing

M&A Transactions

- 50/50 joint venture with Oneok, the leading U.S. pipeline company, for the Roadrunner gas pipeline in the United States.
- 50/50 joint venture with Spain's largest pipeline company and national grid operator for the Soto La Marina compression station in Tamaulipas, Mexico.

Capital Raising

Fermaca has a strong track record in forming strategic alliances with global leaders, which has enabled it to strengthen its competitive advantage in the market and raise over $1,000,000,000 USD in capital for the development of innovative infrastructure projects in Mexico.

Debt Financing

Fermaca has secured over $2,000,000,000 USD in financing through partnerships with national and international banks. Its track record in resource management and commitment to transparency position it as a strong and reliable financial partner.

Why This project Matters

FDO sits at the intersection of **compute scarcity, digital sovereignty, and nearshoring tailwinds**, with a go-live date aligned to monetize the next structural step-up in AI workloads.

1

Global AI compute scarcity

- The race for cutting-edge GPUs has left most enterprises, governments, and innovators in emerging markets under-served. Access – not demand – is the primary constraint.

2

Mexico's strategic inflection point:

- Nearshoring, manufacturing reshoring, fintech growth, and public-sector digitalization are all converging, yet **Mexico lacks an AI-native data center built for GPU-intensive workloads**.

3

LATAM's AI gap

- While hyperscalers concentrate capacity in a few locations, **regional sovereigns, financial institutions, telecoms, and digital natives** are seeking local, secure, low-latency AI compute with data residency in Mexico.

4

Timing the B300 cycle

- FDO is structured to be **one of the first B300 deployments in all of LATAM**, uniquely positioning investors to participate at the front end of the next GPU and AI infrastructure cycle.

5

End-to-End AI Platform Support

- Managed AI services with **GPU scheduling**, and **real-time observability**.
- 24/7 CloudOps and FleetOps teams ensure **maximum uptime and cluster health visibility**.

The Fermaca Digital Origin Opportunity

Fermaca Digital City has entered into a formal, strategic partnership with NVIDIA to become Mexico's first NVIDIA Cloud Partner (NCP). This relationship is designed to position Fermaca as the premier, future-proof hyperscale AI data center operator in the region, purpose-built and validated to NVIDIA's strict technical standards.

Core value proposition

AI-first design: Purpose-built **for GPUaaS / AI Factory** workloads rather than retrofitted from legacy colocation.

Monetization model:

- **GPUaaS** for enterprises, financial institutions, telcos, and AI-native companies
- **Premium colocation** for high-density, high-value AI and HPC workloads
- Optional **managed AI infrastructure services** and strategic capacity allocations for key partners and government entities.

Platform role

- **Flagship innovation hub** within Fermaca's HQ, enabling close alignment with leadership, operations, and strategic partners.
- **Blueprint for scale:** FDO is the **foundation stone of "Fermaca Digital City"**, a long-term vision to develop a multi-site, multi-MW AI and digital-infrastructure platform across Mexico.

Project Summay

1 MW IT load, AI-Ready, GPU → Location Fermaca Corporate HQ, Mexico City → Operational Date: Q2 26'

Fermaca digital origins

Technology Stack & Differentiators

FDO is architected as a **next-generation AI Factory**, with technology choices made to maximize **performance, density, and efficiency,** FDO's technology design delivers a **strategic, not commodity, data center** built specifically for the AI era, not the previous cloud generation.

NVIDIA Reference Architecture

- Designed around NVIDIA's proven AI data center blueprint.
- Enables rapid integration into the **NVIDIA Cloud Partner** ecosystem.

NVIDIA B300 GPUs (First Wave in Region)

- B300 GPUs are **only available to select governments and a small elite group of companies globally**.
- FDO is structured to be **one of the first B300 GPU deployments in LATAM**, giving clients early access to best-in-class training and inference performance.

Hybrid Cooling

- **Fully integrated hybrid cooling** solution built into the facility design.
- Supports **ultra-high density GPU racks**, greater thermal stability, and a more efficient PUE profile versus legacy air-cooled environments.

AI Factory / GPUaaS-ready

- Rack, power, and cooling architecture tuned for **GPU clusters, model training, fine-tuning, and large-scale inferencing**.
- Optimized for **multi-tenant GPUaaS** with strong workload isolation, security, and reliability for institutional users.

Strategic Partnerships & OEM Landscape

- FDO is backed by a high-credibility, globally recognized constellation of partners
- This partner set gives institutional investors strong validation, execution capability, and OEM diversification from day one.

Lead Development & GPUaaS Architect

Engaged by Fermaca to support project development, engineering guidance, and **the commercial structure for GPUaaS and colocation.**

Brings deep experience in high-density compute and AI workload monetization.

Multi- OEM Strategy

C-Suite Visibility

DELL is preparing its first quote in Mexico for this type of AI project, underscoring the differentiation of FDO.

Fermaca is actively quoting with other global OEMs to ensure:

Competitive pricing and supply assurance

Access to best-in-class hardware across the stack

Flexibility to adapt to future AI hardware generations.

NVIDIA Cloud Partner (NCP), positioning the company as the region's premier AI infrastructure operator with direct NVIDIA access, exclusive GPU procurement, and alignment with sovereign AI initiatives across Latin America.

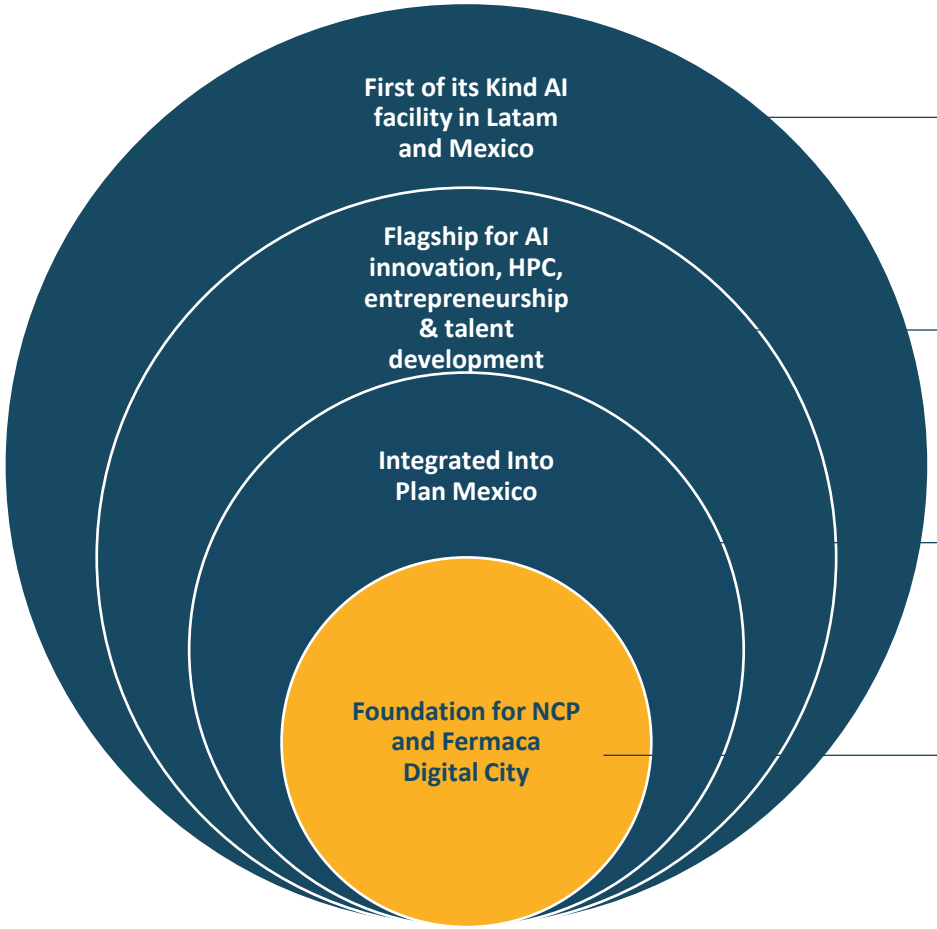
Access to key partnerships that de-risk the project, helping it achieve attractive returns

Aligned with Plan México (federal industrialization initiative through 2030) and SEDECO backing (Mexico City's Secretary of Economic Development).

Unlocking fast-track permitting, 89% tax deductions on infrastructure and R&D, and sovereign compute positioning that strengthens North American AI leadership and continental economic resilience.

Why This Is a Landmark Project for Mexico & LATAM

FDO is positioned to become **the emblematic AI infrastructure project for Mexico**, with impact far beyond a single data center, For Mexico and LATAM, FDO is a **computational sovereignty project,** not just another server room.



A national demonstration site for how **sovereign AI** infrastructure should be built.

A physical and symbolic hub where **startups, universities, enterprises, and public institutions** can access world-class compute.

FDO is not a standalone project; it is a **core component of a broader national-scale strategy** to elevate Mexico in the global AI landscape.

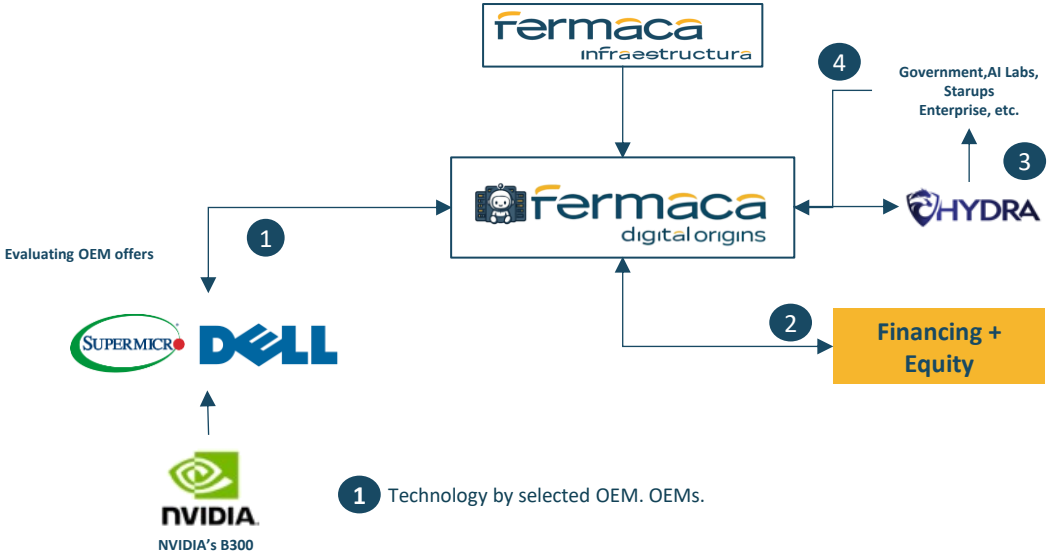
Establishes the reference point for **future multi-MW expansions** and additional sites.

Supports Fermaca's evolution into a the **key NVIDIA Cloud Partner** in the region, anchoring a wider AI ecosystem..

Capital and Corporate Structure

We have advanced on several fronts, including full engagement with Hydra Host's AI-factory accelerator and the integration of key legal, regulatory, and fiscal partners. Simultaneously, we are engaging multiple investment-banking advisors, funds, and lenders with complementary mandates across digital infrastructure and real estate

Element	Target / Positioning	Notes
Capital structure Auxiliary CAPEX	**Target of ~70-80% project debt / 20-30% equity**; institutional project-finance formula (or by the server OEMs themselves) aligned with lending standards.	This includes transformers, meet me rooms, HVAC, etc.
Capital structure Auxiliary CAPEX	Different **OEMs** and **financial institutions** have offered financing through different methods (lease, pay-per-use, credit facilities, etc.)	This includes servers, racks and GPUs. Currently deciding best option.
FX & inflation posture	**Dollarized revenues.** With Fermaca distributing all gross revenue to partners, lenders, etc.	Reduces MXN exposure; supports lender comfort.



1. Technology by selected OEM. OEMs.
2. Financing and equity directly at company level. Fermaca Dreams is entertaining financing proposals from lender banks.
3. Hydra Host offers Fermaca Digital Origin's cloud compute through their Brokkr platform to a wide range of clients. Closing deals from hourly to yearly rates.
4. Proceeds go directly to Fermaca Digital Origins and distributes a pre-determined revenue share with Hydra Host.

Hydra Host as a Strategic Partner

Hydra Host is a specialized **AI infrastructure company** that makes it simple for data center and power owners to turn **GPU capacity into cash-flowing "AI Factories."** Rather than just brokering introductions, Hydra provides a full-stack GPU management and **monetization platform (Brokkr)** that finances, procures, colocates, and rents GPUs to a diversified base of AI end-customers on autopilot

Key Highlights

- **Top 10 NCP – Exclusive status among partners**
- **30,000+ GPUs** under management across **50 data centers at a 90% utilization rate**
- **$205.7B GPU monetization market (2024), growing at 29.9% CAGR through 2030**
- **Only NCP focused exclusively on bare-metal GPU compute at wholesale pricing**

Tangible Partner Benefits

Bring a turnkey **AI Factory Accelerator program that de-risks and accelerates the 1 MW** build-out in Mexico City—from design and NVIDIA procurement to financing and commercialization.

Plug **Fermaca's** power and space directly into **Brokkr**, immediately connecting the site to **global GPU demand** and delivering institutional-grade utilization and revenues without Fermaca needing to build its own sales team, cloud stack, or marketplace.

Align perfectly with Fermaca's role as infra developer: **Fermaca** focuses on **power, real estate and data center delivery, while Hydra handles GPU sourcing, software, customers, and ongoing monetization**—creating a capital-efficient, rapidly repeatable AI Factory model for Mexico.

Hydra Host – AI Market Leader De-Risking Strategy

Through expert planning and execution, **Hydra Host** will assist **Fermaca** in building an **AI Factory** optimized for performance, scalability, and efficiency. By integrating the **Brokkr** platform for seamless GPU monetization and deploying advanced hardware and software, **Fermaca Digital Origin** can accelerate time to market and ensure reliable monetization from the moment of data center launch.

GPU Deployment Initial Planning & Assesment → Hardware Procurement & Installation → Brokkr Stack Deployment (Bare – Metal) → Operational Readiness → Future-Proofing & Expansion → Go-to-Market and GPU-as-a-Service (Bare Metal)

Modular Data Centers (MDCs)

Modular data centers are prefabricated, factory-built facilities where core systems (power, cooling, IT racks, controls) come integrated in standardized modules, assembled and commissioned on-site in weeks to months—versus 2–4 years for traditional stick-built data centers.

Cost Efficiency

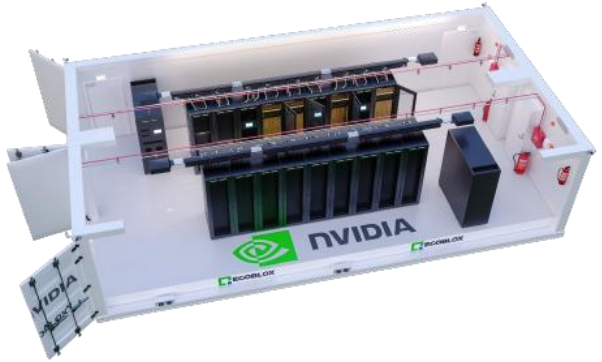
- 3–5x cheaper per MW vs traditional data centers
- Factory prefabrication eliminates on-site construction complexity
- Lower capex, faster path to ROI
- Aligns perfectly with Plan México tax incentives on capex (88–89% depreciation).

Speed to Market

- 10–18 weeks lead time to deploy modular units (vs 24–36 months for traditional builds)
- Addresses hyperscaler urgency for AI/GPU infrastructure).

Efficiency and Scalability

- 25% energy savings vs legacy facilities 12% higher cooling efficiency from integrated cooling design
- Add/remove modules as demand grows (1 rack → 6-racks → 14-racks → 28+ racks) Easily relocate or expand to different sites



NVIDIA Strategic Partnership

Fermaca Digital City has entered into a formal, strategic partnership with NVIDIA to become Mexico's first NVIDIA Cloud Partner (NCP). This relationship is designed to position Fermaca as the premier, future-proof hyperscale AI data center operator in the region, purpose-built and validated to NVIDIA's strict technical standards. Fermaca is set to be a Preferred NVIDIA Cloud Partner by Q1 26'

NCP Status

Becoming an **NCP** would position Fermaca Digital City as **one of the few certified NVIDIA AI data hubs in Latin America**, unlocking:

- **Differentiation:** AI-ready colocation with direct NVIDIA endorsement.
- **Premium Clients:** Access to NVIDIA's enterprise, research, and government partner network seeking sovereign, low-latency AI infrastructure in Mexico
- **Revenue Uplift:** AI workloads command higher $/kW vs. traditional hosting, with long-term contracts and predictable cash flows.
- **Scalability:** Direct hardware pipeline and technical support to expand from 40kW to 1MW+ rack densities.

Sovereign AI

Sovereign AI refers to a nation's ability to produce artificial intelligence using its own infrastructure, data, talent, and business networks. Our partnership with NVIDIA enables us to activate such an ecosystem.

- A visit to the NVIDIA headquarters in Santa Clara, California took place the week of November 17th. Here NVIDIA's AI Nations team, Federal and State (Durango) leaders and Fermaca Dreams executive team attended to formally enroll in their Sovereign AI program.
- **Fermaca set to become a Preferred NVIDIA Cloud Partner by Q1 26'**

Key Benefits and Pillars

NVIDIA Cloud Partner → Exclusive GPU Access + AI Enterprise Stack → LATAM AI Market Capture

Optimized Infrastructure

Comprehensive, full-stack hardware and software solutions are built with NVIDIA GPUs, networking, and NVIDIA AI Enterprise software. Access NVIDIA accelerated computing globally with NVIDIA DGX™ Cloud Lepton.

Regional Alignment

NCPs are uniquely positioned to meet an organization's requirements using its own data and business networks. Sovereign AI infrastructure allows a country to upskill its workforce and expand AI adoption for local benefit.

Flexibility

Range of integrated services—leveraging relationships and partnerships with leading storage, compute, security, and AI tools—help organizations build and scale specialized solutions to meet objectives.

NVIDIA AI Readiness

With comprehensive training, rigorous guidelines, and supporting services from NVIDIA, NCPs are well-equipped to deliver and support full-stack, AI-optimized offerings based on the NCP reference architecture.

Plan Mexico and Mexico City's Secretary of Economic Development Backing

Plan Mexico

Plan México is the federal government's new national strategy to attract investment, deepen nearshoring, and accelerate industrialization and energy/infrastructure build-out toward 2030. It combines policy, public investment and tax incentives (the 2025 decree) under one umbrella to position Mexico among the world's top 10 economies and increase "Made in Mexico" content in value chains

Fermaca's Projects in Mexico City – Alignment with Local Government

Tax Efficiency - Federal Plan México + CDMX local ISR reductions compound to dramatically improve project IRR

SEDECO Backing – Full backing from Mexico City's Secretary of Economic Development, unlocking fast-track permitting, land-use reclassification, and central government bypass—reducing execution risk and timeline.

Energy Cost Advantage- By being integrated to Plan Mexico we can enjoy of considerable discount on energy prices.

Mexico City's Fiscal Incentives

- **Payroll tax cut (ISN), property tax, and real-estate acquisition tax, invest in high-tech sectors, concentrate workers in the same borough, and hire researchers.**

Plan Mexico Fiscal Incentives

- **Immediate 88% deduction for new fixed asset investments in personal desktop and laptop computers; servers; printers, optical readers, plotters, barcode readers, digitizers, external storage units and network hubs**
- **Immediate 89% deduction for new fixed assets destined directly to research of new technological products or development of technology in the country. This Incentive helps us**

Alignment with Plan Mexico

1. **Be in the top 10 economies –** Supporting the development of mega-scale projects.
2. **$100 billion USD in investment - $45 million USD in investment on this project alone-**
3. **1.5 million jobs -** Creating more than 100 direct and indirect jobs.
4. **50% of public procurement will be of national content -** Offering domestically produced AI to meet the country's technological needs.
5. **Corporate environmental sustainability -** Carrying out investments with ESG (Environmental, Social, and Governance) practices and using highly efficient technologies.

Bilateral Benefits: Mexico & US

- **Strengthens North America AI Leadership**
- **Enhances Connectivity Resilience**
- **Stimulates Continental Economic Growth**
- **Supports National Security & Sovereignty**
