Fermaca Digital Origin

# “Mexico’s First GPUaaS Offer”

# Fermaca Digital Origin

## Mexico's First GPUaaS Offer

## (FDO) Project Overview

### The Digital City Project

**Fermaca Digital Origin (FDO)** positions **Mexico** as a competitive global hub for AI workloads. This **$45m USD, 1 MW** facility combines NVIDIA Reference Architectures, next-gen liquid cooling, and connectivity. Acting as the operational precursor to the 250 MW Fermaca Digital City and a **key driver of the country's Sovereign AI agenda**, this project secures the high-performance infrastructure required **to launch the region's first NVIDIA Cloud Partner.**

## Built for AI: Key Infrastructure

- **AI Factory:** 1MW AI Factory set for colocation and GPUaaS services powered by GB300 clusters.
- **Scalable Data Center:** Our modular architecture optimizes both CAPEX and OPEX, delivering a streamlined, cost-effective operation designed for rapid scalability and deployment
- **Proven Cloud Partner:** Our strategic alliance with Hydra Host leverages proven management frameworks to de-risk deployment and accelerate commercialization from day one.

### Sovereign AI and Govt. Allignment

Part of **'Plan México,'** supported by the **Mexico City Government and the Agency for Digital Transformation and Telecommunications** This strategic alignment ensures the project drives AI sovereignty and positions Mexico as a global leader.

Gobierno de México · Transformación Digital · CIUDAD DE MÉXICO

FDO is actively enabling the deployment of sovereign AI applications by integrating with the strategic objectives of Mexican government entities, including:

**Health** · **Safety** · **Education** · **Citizen Services**

### Strategic Business Value

**NVIDIA Partnership:** Build a truly future-proof, AI-ready data center: leveraging NVIDIA Reference Architectures and priority GPU access, our solution delivers optimal performance, guaranteed compatibility, and rapid scale for AI workloads

Ready to attain North America's overflowing training and inference demand as well as attending regional AI compute necessities

**Local Govt. and State Utility Support:** Full energy integration supported directly by the government state utility CFE and Mexico City's Secretary of Economic Development. Allowing priority service to the country's first AI Factory

**High-Density GPU Superclusters** Supports ultra-dense AI compute with +**130 kW/rack**, leveraging **advanced liquid cooling**. Ready for GB300 and Rubin workloads

**Tax and regulatory incentives**

- Accelerated depreciation on all fixed assets
- 25% deduction for spending on labor training, innovation, and R&D.
- Expedited and streamlined permitting

**Connectivity Access** Availability of redundant fiber pairs offered by the countries leading connectivity providers. Ensuring optimal connectivity uptime to serve customer demands.

### Mexico City as a Strategic Location

**Energy Access** : Holistic support from local government agencies and state utility for affordable and available power

**Secure and strategic geography**: Located in the Fermaca HQ which is a certified mission critical operations center

**Robust connectivity:** Numerous redundant, underground fiber available to serve AI workloads

**Government:** Federally aligned agenda, presidential-level visibility in national programs, fast-track and incentives.

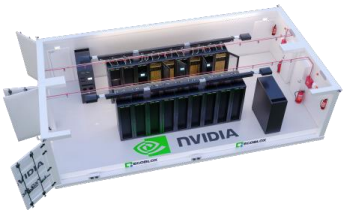
## Hydra Host as a Strategic Partner

**Hydra Host** is a specialized **AI infrastructure** company that makes it simple for data center and power owners to turn **GPU capacity into cash-flowing "AI Factories."** Rather than just brokering introductions, Hydra provides a full-stack GPU management and monetization **platform (Brokkr)** that finances, procures, colocates, and rents GPUs to a diversified base of AI end-customers on autopilot

### Hydra Hosts Role

Hardware Procurement & Installation → Brokkr Stack Deployment (Bare – Metal) → Future-Proofing & Expansion → Go-to-Market and GPU-as-a-Service (Bare Metal)

**Strategic Synergy:** We de-risk deployment through a turnkey accelerator that pairs Fermaca's infrastructure delivery with Hydra's full-stack monetization, ensuring a capital-efficient and future-proof operation.



### Key Company Milestones

- Top 10 NCP – Exclusive status among partners
- 30,000+ GPUs under management across 50 data centers at a 90% utilization rate
- $205.7B GPU monetization market (2024), growing at 29.9% CAGR through 2030
- Only NCP focused exclusively on bare-metal GPU compute at wholesale pricing

## NVIDIA Collaboration

We've partnered strategically with NVIDIA to build a truly future-proof, AI-ready data center: leveraging NVIDIA Reference Architectures and priority GPU access, our solution delivers optimal performance, guaranteed compatibility, and rapid scale for AI workloads. This project is a national demonstration site for how sovereign AI infrastructure is to be built and supports Fermaca's evolution into a key NVIDIA Cloud Partner in the region, anchoring a wider AI ecosystem.

Allignment with NVIDIA's and Mexican Govt. Sovereign AI Efforts → Flagship for AI innovation, HPC, entrepreneurship & talent development → Catalyzer of local talent and AI economy development → Foundation for the Fermaca Digital City Project

### Core Partnership Benefits

- **Optimized Infrastructure**
- **Regional Alignment**
- **Flexibility**
- **NVIDIA AI Readiness**

## Key Capital and Development Highlights

WE ARE HERE!

Q2 25' → Q3 25' → Q4 25' → Q1 26' → Q2 26'

Preliminary Studies and Factibility | Sovereign AI | FID | Funding | Construction | COD

| | |
|---|---|
| **Infra Assets Capital structure** | [70%] project debt / [30%] equity for a $6 m USD investment |
| **GPU Assets** | 70-80% LTV $35 m USD |
| **Incentives** | 90% accelerated depreciation on fixed assets, 60% tax deduction on net income +25% for training and +25% for R&D. |
| **FX & inflation posture** | Dollarized revenues via Hydra Host's Brokkr Platform |

Strategic capital structure enabling multi-layered debt and equity investment. Ready for investment today.
